Examiner's Amendment

1) An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Change title to:

--Method and apparatus for manufacture of laminated optical disc including defoaming adhesive--

See MPEP 606.01.

In the specification:

on page 1 lines 3 and 4 of the specification, change "U.S. Application No. 09/147,140, filed October 16, 1998" to -- U.S. Application No. 09/147,140, filed December 17, 1998, now US Patent 6,309,485--.

The above change to the continuing data corrects an obvious error and updates the continuing data. See MPEP 1302.04. With respect to the obvious error, the filing date of 09/147,140 is 12-17-98 (the date of receipt of 35 USC 371(c)(1), (c)(2) and c(4) requirements) instead of the filing date described in the declaration (the date applicant filed the specification). See MPEP 1893.03(b).

Reasons for Allowance

2) The following is an examiner's statement of reasons for allowance which supplements applicant's arguments filed 10-30-03:

The obvious type double patenting rejections have been withdrawn because claims 6, 8-13, 17 and 19-20 have been canceled.

The prior art rejection of Europe '178 in view of Komori et al, and admitted prior art or Japan '212 has been withdrawn in view of (1) applicant's arguments on page 13 of the response filed 10-30-03 and (2) the following comments by the examiner: The admitted prior art at page 9 lines 3-8 of the specification does not describe the temperature of the adhesive (light setting resin) during removal of any introduced bubbles as being higher than the temperature of the adhesive during coating of the adhesive on the substrate. This is consistent with applicant's comment that "there appears to be no disclosure whatsoever in ... Applicant's admitted prior art ... with respect to the relative temperatures of either the defoaming tank or the adhesive source" (page 13 of response filed 10-30-03). Japan '212 fails to disclose the temperature of the UV resin during defoaming or the temperature of the UV resin when used in optical disk apparatus. See abstract of Japan '212. Komori et al discloses the temperature of hot melt adhesive during application of the hot melt adhesive to a substrate of an optical disc to be manufactured, but fails to suggest defoaming. Although Anderson teaches recycling adhesive and relative temperatures for the adhesive, Anderson fails to teach defoaming. More importantly, Anderson teaches maintaining hot melt adhesive at a relatively low temperature (except when heated in a high melt zone for adhesive application) to *avoid undesirable degradation* and thereby cannot suggest the subject matter of "the second predetermined temperature is higher than the first predetermined temperature" in claims 1, 14 and 15. The prior art of record

Art Unit: 1733

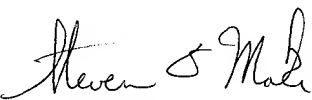

whether taken singly or in combination fails to disclose, teach or suggest modifying Europe '178, Komori et al or the admitted prior art such that "the second predetermined temperature is higher than the first predetermined temperature" as set forth in laminated optical disc manufacturing method claim 15 or so as to include the claimed defoaming tank as set forth in the laminated optical disc manufacturing apparatus of either claim 1 or claim 14.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
